HACKTOBERFEST 2026 SUBMISSION

Campus to Career

From Skills to Opportunities

An open-source, student-first platform that connects early-career talent with verified opportunities, protects students from fraudulent internships and fee extortion, and builds ATS-ready resumes that never fabricate qualifications.

Discover > Verify > Tailor > Apply > Track

Open-weight AI (Gemma 2 via Ollama) | Deterministic security guardrails | Truth-preserving resumes

PROJECT OVERVIEW

The problem we solve

Every year, millions of students search for internships, freelance projects and first entry-level jobs. Bad actors exploit that ambition.

The problem

Bogus listings demand upfront registration fees, security deposits, or sensitive identity documents such as Aadhaar, PAN cards and banking details. Students have no quick, explainable way to tell real from fake.

Our solution

Campus to Career matches students to opportunities purely on demonstrable skills, inspects any listing with explainable AI-assisted trust verification, and generates ATS-tailored resumes that never fabricate qualifications.

Core capabilities

01 Opportunity Marketplace

Search and filter internships, freelance and part-time roles, each with a verification badge and a Trust Passport.

02 TrustCheck Scanner

Paste a link or listing text and get a 0-100 risk score with a weighted, evidence-based signal breakdown.

03 AI Resume Tailor

Upload a master resume, pick a target role, and export a role-specific PDF with zero fabricated claims.

04 Student Dashboard

Verified skills, high skill matches, saved roles, applications and trust-check history in one place.

05 Application Tracker

A drag-and-drop pipeline from Saved to Selected, linked to TrustCheck results and tailored resumes.

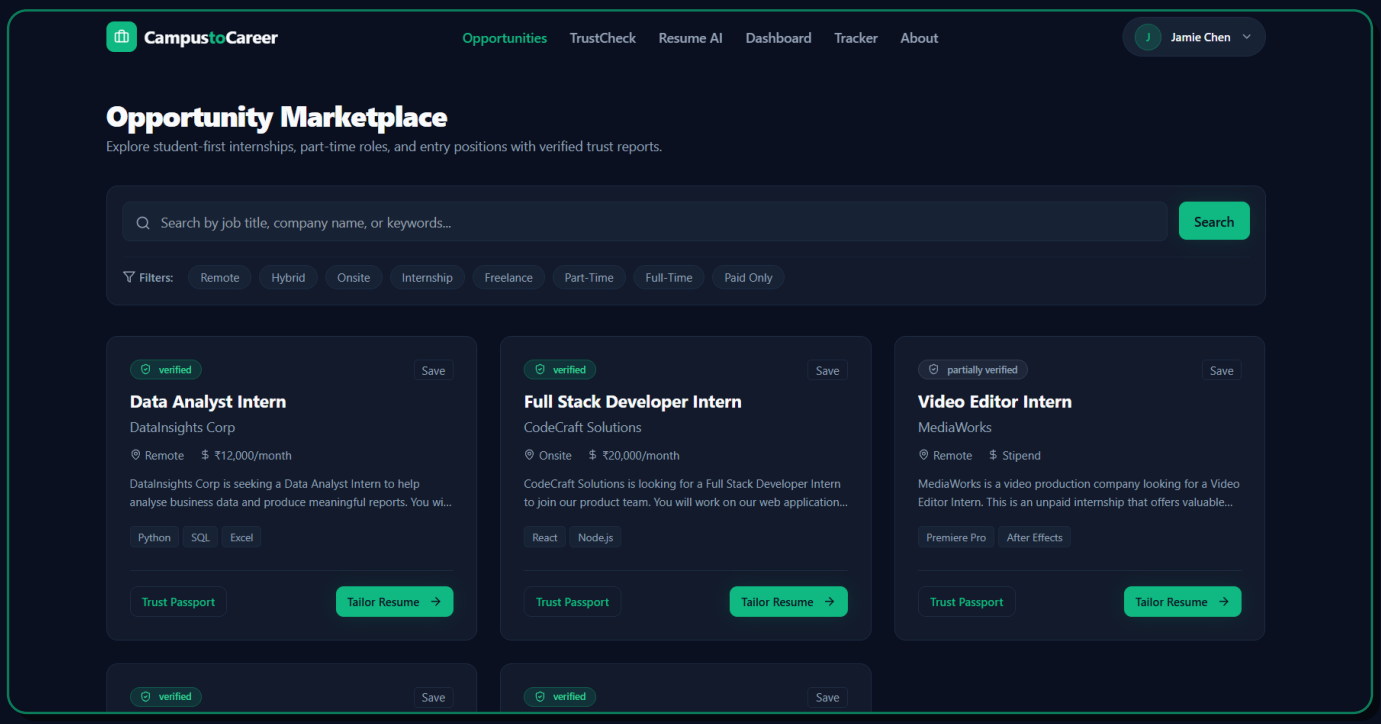

The student journey

Discover > Verify > Tailor > Apply > Track

FEATURE 01

Opportunity Marketplace

Explore student-first internships, part-time roles and entry positions, every one accompanied by a verified trust report.

Opportunity Marketplace: search, filters, verification badges, skill tags, and one-click actions.

- **Search and filters.** Search by job title, company or keyword, then narrow by Remote, Hybrid, Onsite, Internship, Freelance, Part-Time, Full-Time or Paid Only.
- **Verification badges.** Each listing is marked verified or partially verified, so unpaid or unconfirmed roles are visible at a glance.
- **Skill-tagged cards.** Required skills (for example Python, SQL, React, Premiere Pro) appear on every card with location and pay.
- **Trust Passport and Tailor Resume.** Open a role's trust report, or jump straight into resume tailoring for that role.
- **Save for later.** Bookmark roles and move them into the Application Tracker.

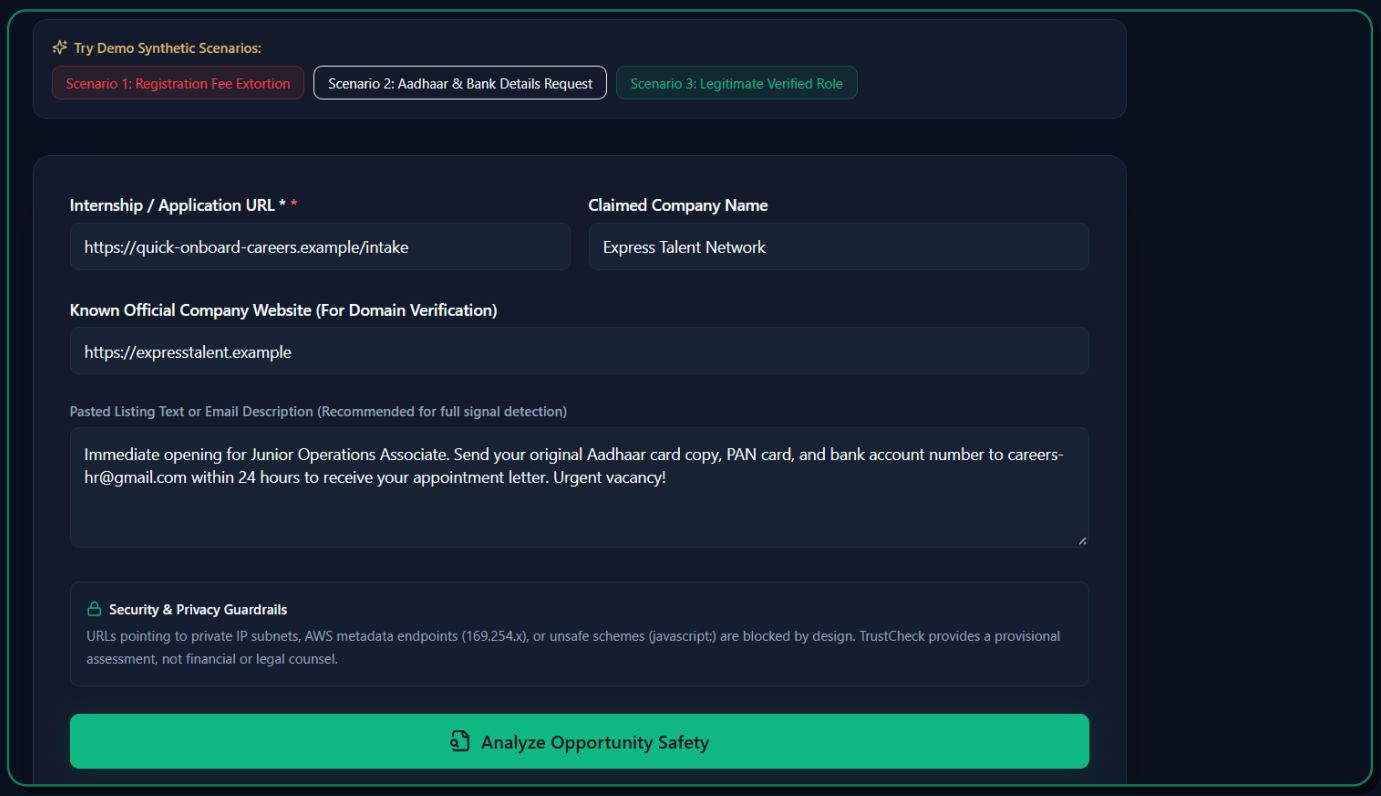

WHY IT MATTERS

Students see the trust level of a role before they ever click apply, so verification becomes part of discovery rather than an afterthought.

FEATURE 02

TrustCheck Scanner

Explainable scam detection: paste a link and the listing text, then get a weighted risk score and the evidence behind it.

Input form with demo scam scenarios and built-in security guardrails.

- **Multi-signal input.** Application URL, claimed company name, known official website for domain verification, and pasted listing or email text.
- **Built-in demo scenarios.** Registration Fee Extortion, Aadhaar and Bank Details Request, and a Legitimate Verified Role, ready to try in one click.
- **Security guardrails.** URLs pointing to private IP subnets, cloud metadata endpoints (169.254.x) or unsafe schemes such as javascript: are blocked by design.

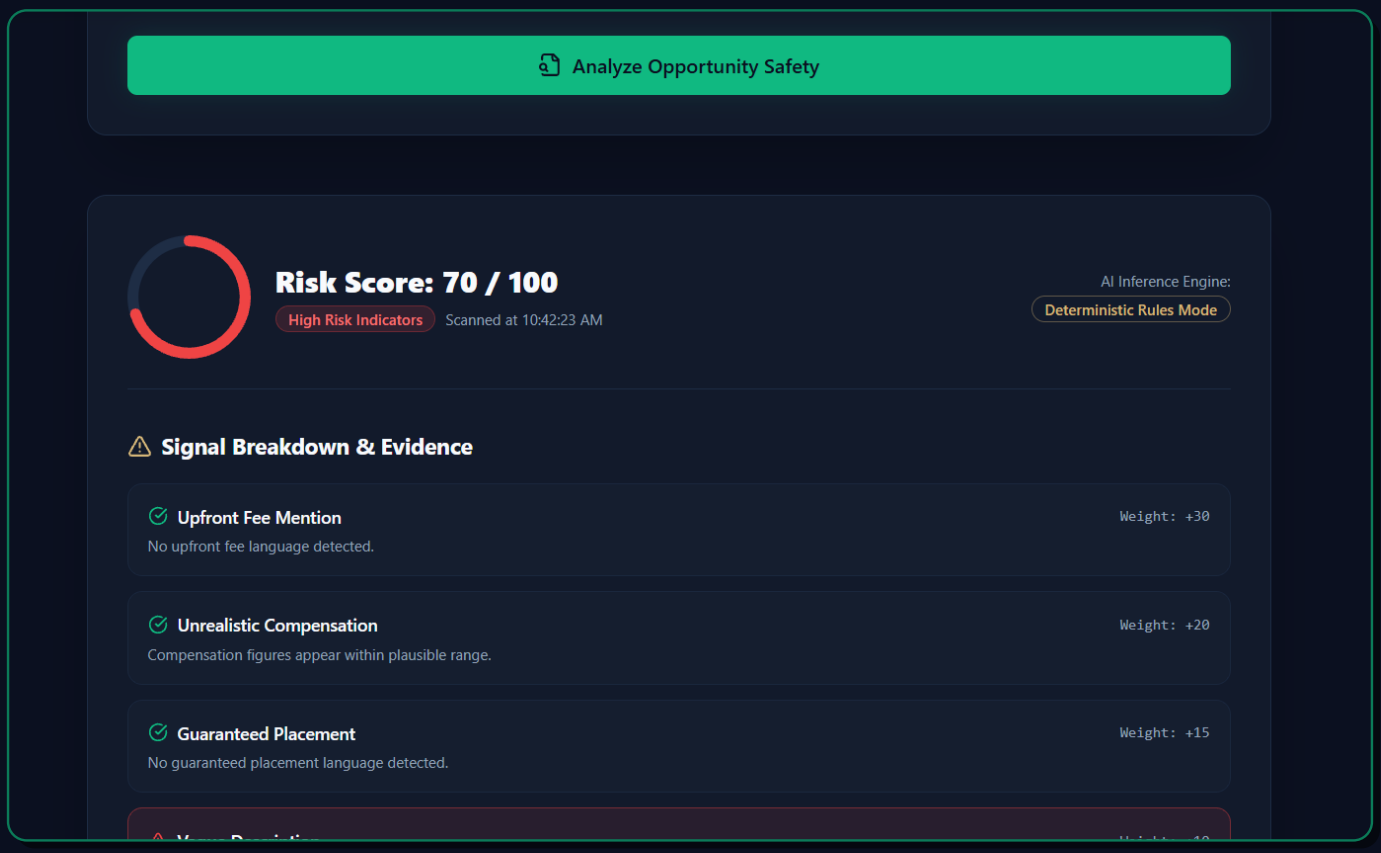

WHY IT MATTERS

A listing that asks for Aadhaar, PAN and bank details within 24 hours is a classic data-harvesting pattern. TrustCheck turns that gut feeling into a measurable, explainable score.

FEATURE 02

Risk Score and Evidence

Every verdict comes with its reasoning: students see exactly which signals fired and how much each one weighs.

Risk score ring with a signal-by-signal breakdown and weights.

- **0-100 risk score.** A clear indicator, from low risk to High Risk Indicators, with a scan timestamp.
- **Weighted signals.** Upfront Fee Mention (+30), Unrealistic Compensation (+20), Guaranteed Placement (+15) and Vague Description (+10).
- **Deterministic Rules Mode.** Critical security checks do not rely solely on a language model, so results stay consistent and auditable.

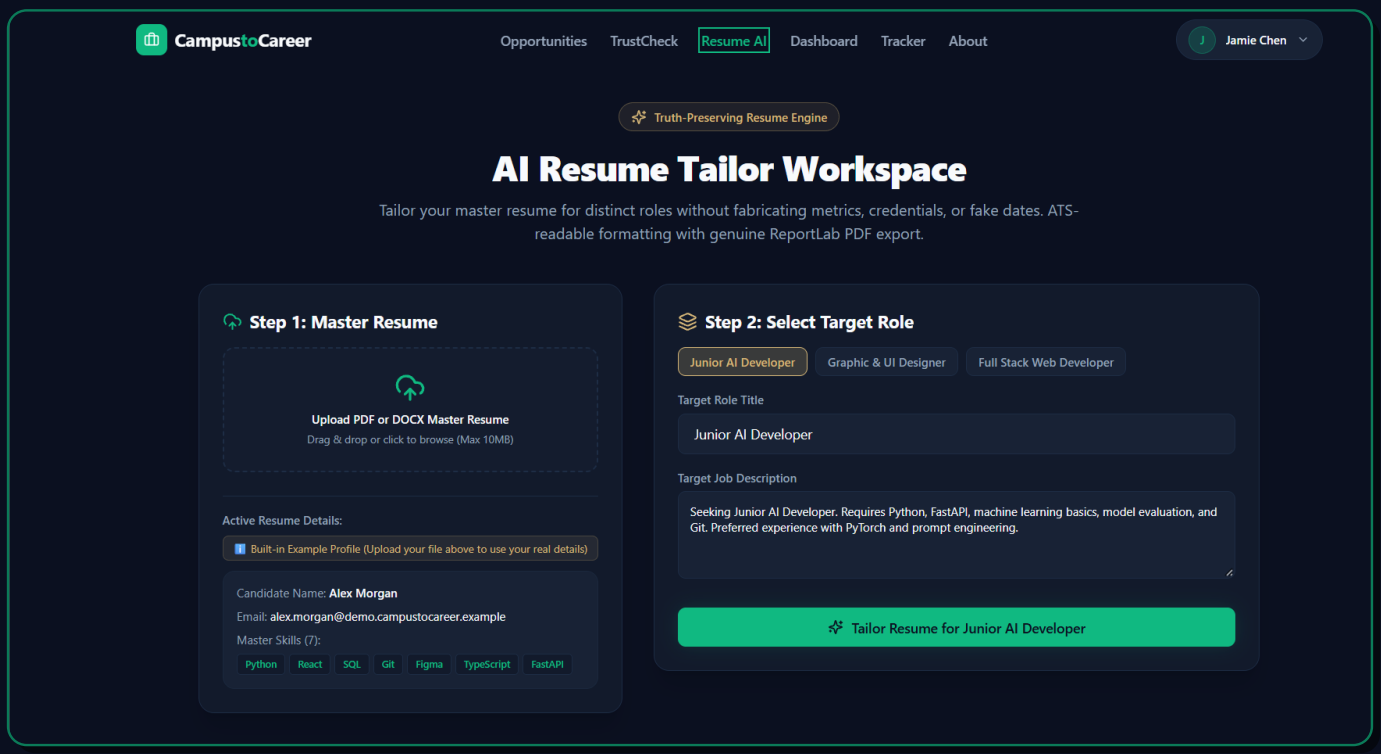

EXPLAINABLE BY DESIGN

Instead of a black-box verdict, each signal shows its evidence and weight, so students learn what a fraudulent listing looks like.

FEATURE 03

AI Resume Tailor Workspace

A truth-preserving resume engine: tailor your master resume to a role without inventing metrics, credentials or dates.

Step 1: upload a master resume. Step 2: choose a target role and paste the job description.

- **Step 1: Master Resume.** Upload a PDF or DOCX (up to 10 MB), or try the built-in example profile with its skills list.
- **Step 2: Target Role.** Pick a preset such as Junior AI Developer, Graphic and UI Designer or Full Stack Web Developer, or enter any role title and job description.
- **One-click tailoring.** Generates a role-specific resume that highlights the most relevant skills and projects.
- **Zero fabrication.** No invented metrics, credentials or fake dates; every line traces back to the master resume.
- **ATS-ready export.** ATS-readable formatting with genuine ReportLab PDF export.

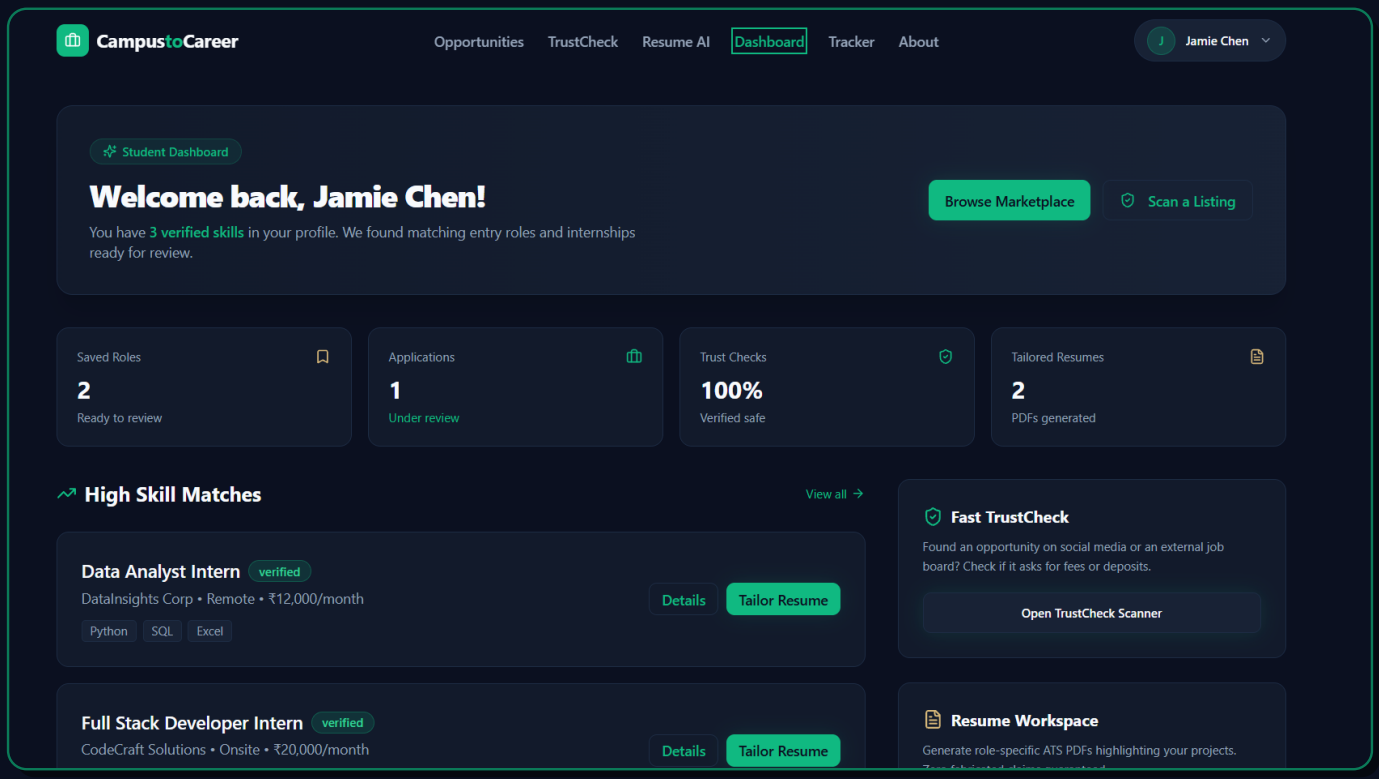

TRUTH OVER HYPE

A resume that exaggerates can cost a student an offer. The tailor engine reorders and emphasises real experience, and never invents any.

FEATURE 04

Student Dashboard

A personal command centre for skills, matches and career activity.

Dashboard: activity stats, high skill matches, Fast TrustCheck and Resume Workspace.

- **Career snapshot.** Saved roles, applications, trust checks and tailored resumes at a glance.
- **High Skill Matches.** Roles ranked against the student's verified skills, with Details and Tailor Resume actions.
- **Fast TrustCheck.** Found a job on social media or an external board? Check it for fees or deposits in one click.
- **Resume Workspace.** Generate role-specific ATS PDFs that highlight your projects.

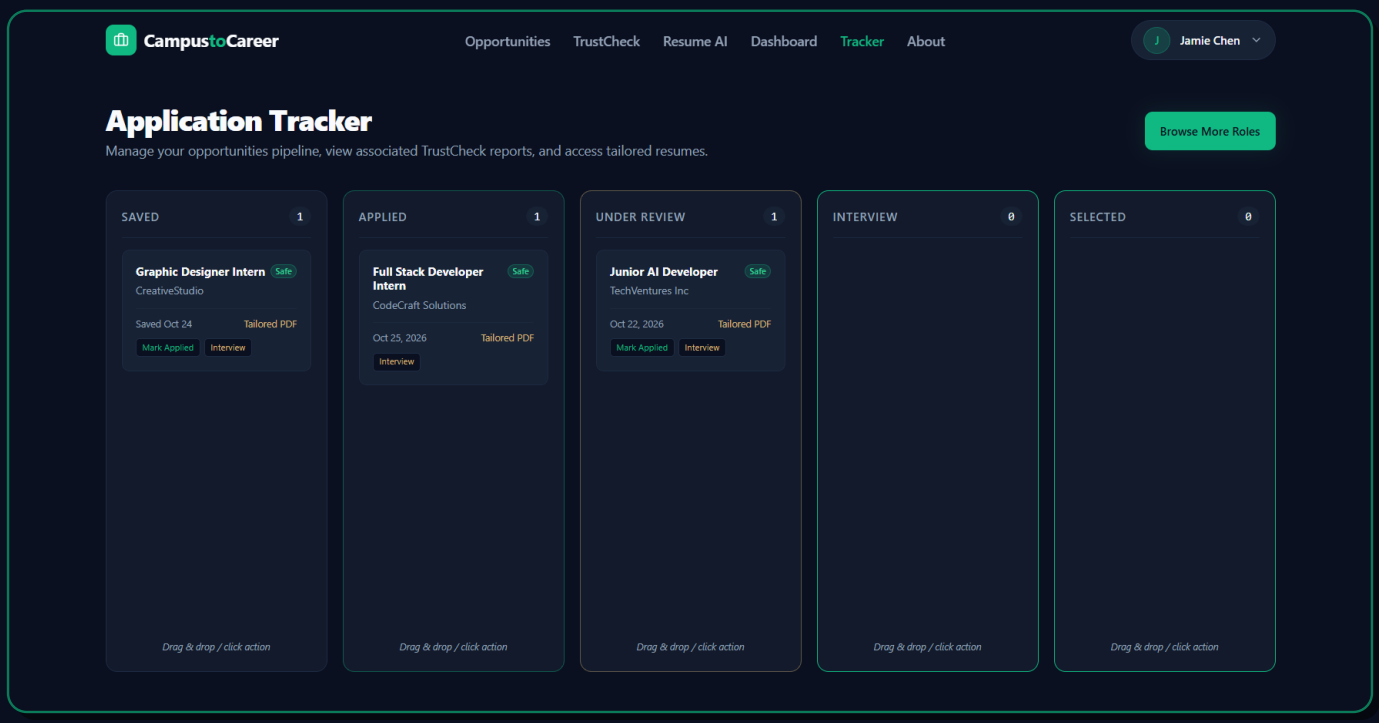

ONE PLACE FOR EVERYTHING

Matches, safety checks and tailored resumes connect directly to each other, so the next step is always one click away.

FEATURE 05

Application Tracker

Manage the whole opportunities pipeline, view TrustCheck reports and access tailored resumes.

Kanban pipeline: Saved, Applied, Under Review, Interview, Selected.

- **Five-stage pipeline.** Saved, Applied, Under Review, Interview and Selected columns with live counts.
- **Drag and drop or click.** Move cards between stages, or use quick actions such as Mark Applied and Interview.
- **Safety at a glance.** Each card carries its trust status (for example Safe) alongside the saved or applied date.
- **Tailored PDF per role.** Open the exact resume that was generated for each application.

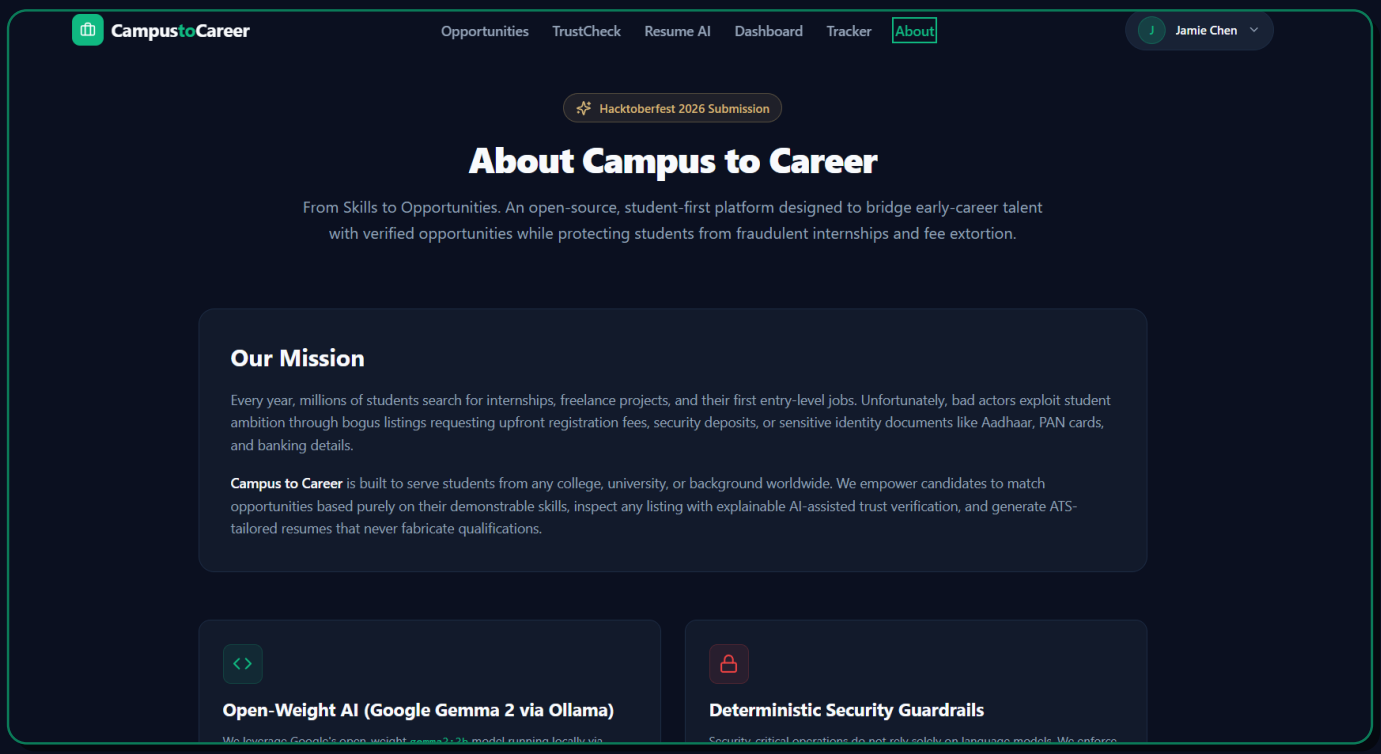

END-TO-END VISIBILITY

From the first saved role to the final selection, students keep every application, trust report and resume version together.

UNDER THE HOOD

Technology and principles

Open-source by design, with AI that runs locally and security that does not depend on a language model alone.

About page: mission, open-weight AI and deterministic security guardrails.

Open-weight AI

Google Gemma 2 (gemma2:2b) runs locally through Ollama, so there are no paid APIs, no cloud credits and no student data sent to third parties.

Deterministic guardrails

Security-critical operations do not rely solely on language models. Rule-based checks enforce the scam signals and URL safety rules.

Truth-preserving resumes

Tailoring reorders and emphasises what is already true. It never invents metrics, credentials or dates.

PDF export

Resumes are exported with ReportLab as clean, ATS-readable PDFs.

GET INVOLVED

Getting started and contributing

Campus to Career is open source. The full setup guide lives in the repository README.

```
# 1. Clone the repository
git clone https://github.com/<your-username>/campus-to-career.git
cd campus-to-career

# 2. Pull the local model (Ollama must be installed)
ollama pull gemma2:2b

# 3. Install dependencies and start the app
<see README for the exact commands>

# 4. Open http://localhost:3000
```

Contributing

- **Fork and branch.** Fork the repo and create a feature branch for your change.
- **Keep it truthful.** Resume features must never fabricate qualifications; scam rules should stay explainable.
- **Open a pull request.** Describe what changed and attach screenshots for UI updates.

Disclaimer

TrustCheck provides a provisional assessment, not financial or legal counsel. Always verify an opportunity through official channels before sharing documents or making payments.

BUILT FOR HACKTOBERFEST 2026

Campus to Career is open source and welcomes contributors. Pick an issue, open a pull request and help protect students from fraudulent opportunities.
